Lucasey Manufacturing Announces:

The FSWP1830 Portrait Orientation Pull Out Wall Mount

Oakland, California, 6/29/2010 – The new FSWP1830 wall mount is being used at the SFO airport in rows of portrait mounted flat screens used for information displays. The screens needed to be inaccessible to the public while still being easy to maintenance and install by the airport personnel. Our solution is to use a pull-out mount similar to previous models we made for hospitality and monitor wall applications. The FSWP1830 scissor action arms provide solid support for portrait mounted flat screens up to 150lbs. The arms provide a smooth gliding action as the screen is pulled out from the wall. The screen can have less than 1/16th inch clearance around the perimeter and can still be fully recessed into the wall.

With the screen fully recessed into the wall, the screen cabling is tamper-proof and inaccessible to the public. Two slim release tools are required to pull on the latching mechanism release catches underneath the screen. Once released, the screen can be easily pulled out.

Lucasey now provides three different sizes and configurations of the pull out flat screen wall mount for landscape and portrait applications. We are able to make this type of pull-out mount for heavier & larger or lighter & smaller screens.

If you need a modification, a different size or another application where this mount can be used, please contact us.

ABOUT LUCASEY MANUFACTURING - Lucasey Manufacturing has been leading mounting industry innovation since 1954. Many of the standard mounting technologies are patented by Lucasey. Mounting systems manufactured by Lucasey are used in millions of applications including: hospitality, lodging, hospitals, schools, airports and homes.
