New Product Development

We have been busy at Lucasey Manufacturing with new product development. The manufacturers of flat screens have been busy coming out with new models and we have been busy making mounts to fit them. Less than a year ago the term 3D TV was a dream and now there are full HD 1080p 3D LED TVs. The screens are getting lighter, in some cases, and the mounting patterns are always changing.

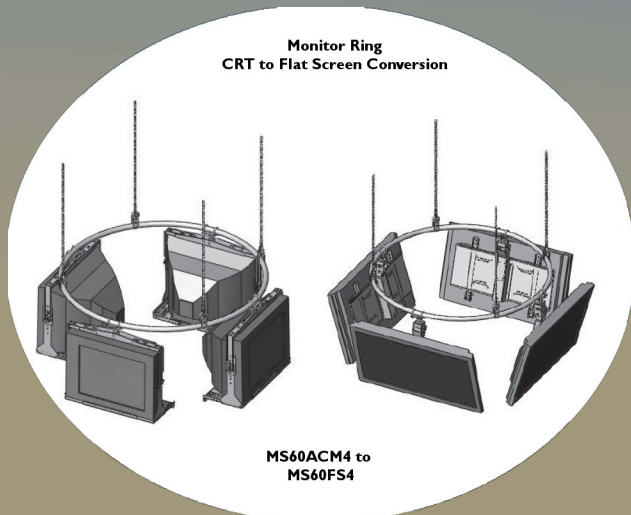

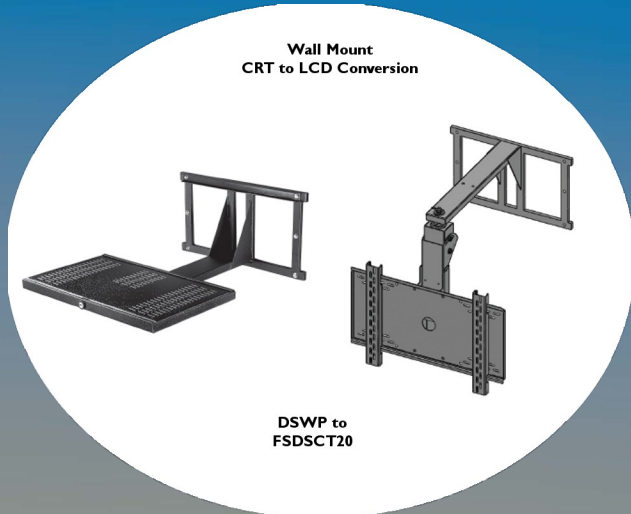

The flat screen cross-reference product locator, online at www.lucasey.com, is updated frequently with new makes and models. We work to make sure that this cross reference lists the most current models of flat screens. New models are always coming out so let us know if you have one that is not listed in our reference.

The primary focus of our product development is always safety. We design our products to be stronger than is needed for any given application. We load-test our products to make sure they are well made. Many of our products are used in commercial applications that require the least amount of liability and the strongest possible mounting solution. When you are looking for the best mounting product, contact Lucasey Manufacturing.

Conversion Kits for CRT to LCD TVs

Lucasey stocks a wide variety of mounting accessories and products that can be used to convert from CRT TV mounts into flat screen applications. The conversion of mounts in hospital rooms, hotel rooms, board rooms, airports, coliseums and anywhere that there is still an old CRT TV running is ongoing. Much of the current Lucasey flat screen mounting business is related to the conversion of facilities with older CRT screens. We have kits for converting ceiling mounts, wall mounts, monitor rings and in-line suspension systems. If we haven't already dealt with a type of conversion, let us know and we'll come up with the parts needed to provide a solution.

You can always talk to someone here at Lucasey who is knowledgeable about what is needed for every type of conversion possible. Since we have been in this industry from the beginning, we have unique knowledge about all of the products used over the years to mount older TVs and what to do to change out mounts for new flat screens.

**ZZ Part Numbers
Don't Mean We're Going to Sleep**

We use the ZZ part numbers for custom products that may or may not be used again for a variety of different applications. Many of our standard products started out as custom ZZ part numbers and through continued customer demand, we needed to create standard part numbers.

The assignment of specific part number for a product allows us to keep track of these products over the years and make them the same way the next time they are ordered. Sometimes there are years in between orders, but we are still ready to make each product as many times as is needed. No one at our manufacturing facility is falling to sleep on the job.
